21
1. Mobile network system for temporary connection to
a fixed information system of a public network or a
private company network, provided with physical access
5 points, characterised in that this mobile network system
comprises at least:

- 10 ▪ an on-board network system, comprising a router
managing a local network to which are connected at
least one server and at least one work station fitted
with their peripheral elements enabling information
messages to be created, sent, received and read; and
- 15 ▪ radio transmission/reception means enabling said on-
board network system to establish a communication with
a radio channel access network, in turn inter-connected
with a public or private fixed transport network,
enabling said on-board network system to be connected
to at least one physical access point of said
information system and information messages being
exchanged between said on-board network system and said
20 fixed information system;
- interfacing means between said on-board network system
and said radio transmission/reception means.

2. System as claimed in claim 1, characterised in
that said radio transmission/reception means are a radio
25 module enabling said mobile network system to be
connected to a radio channel access network via a radio
communication network operating on cordless technology
and said interfacing means for radio
transmission/reception are provided with a data
30 transmission port.

4. System as claimed in claim 1, characterised in
10 that said radio transmission/reception means are a mobile
satellite terminal enabling connecting to a radio channel
access network via a link having at least one satellite
and comprising a serial output port forming said
interfacing means with the on-board network.

15 5. Use of the mobile network system as claimed in
one of the preceding claims 1 to 4, separately or in
combination, for a temporary connection to a network, a
fixed information system.
